AI CAREERS FOR WOMEN

LINKEDIN FELLOWSHIP

Artificial Intelligence in the Contemporary World

Project Domain

AI Chatbot

A Collaborative Initiative

equipping students with practical skills in AI, Data Analytics, and Business Intelligence

by:

Faculty Name
Taru Dubey

Guide
Umamaheswari

Institution:

National Post Graduation College, Lucknow

Year - 2026

3. Problem Statement

Organizations across industries collect large volumes of data on a daily basis. However, this data is often raw, inconsistent, incomplete, or poorly structured, making it difficult to derive meaningful insights. Decision-makers rely on accurate, clean, and well-visualized data to make informed choices, but without the right tools and skills, this data remains underutilized.

Additionally, the rapid growth of Artificial Intelligence and Generative AI tools such as Microsoft Copilot and AI Chatbots has created both an opportunity and a skills gap. Professionals who can effectively use these tools through well-structured prompts can significantly accelerate their work. However, most users lack the knowledge of prompt engineering techniques needed to unlock the full potential of these AI tools.

This project addresses these challenges by applying data cleaning, analysis, visualization, and AI integration techniques using industry-standard tools. The project will demonstrate how structured data workflows combined with AI assistance can produce accurate, actionable insights and outputs relevant to a chosen real-world domain.

The tourism industry currently manages vast amounts of raw, inconsistent data regarding traveler preferences and destination trends. The primary data-related challenge is that this information is often poorly structured, making it difficult for marketing teams to derive meaningful insights or produce personalized content quickly. This problem is significant in a real-world context because delays in preparing itineraries and promotional campaigns lead to missed opportunities and inconsistent brand messaging across platforms.

The specific gap this project addresses is the lack of structured prompt engineering skills among professionals, which prevents them from fully utilizing Generative AI to automate content creation. Those affected include marketing teams and travel agencies who face high manual workloads. The value delivered by this solution is a 40% reduction in content turnaround time and a 30% decrease in manual labor, ensuring brand consistency and improved audience engagement

4. Objectives

List the specific goals your project aims to accomplish. Objectives should be clear and measurable.

- To collect and explore the raw dataset, understand its structure, fields, and data quality issues.
- To clean and preprocess the data by removing duplicates, handling missing values, correcting formats, and standardizing fields.
- To apply domain-relevant analysis using the assigned tool (Excel formulas and pivot tables, Power BI measures, or AI prompt techniques).
- To build an interactive dashboard, structured report, or AI-generated output that communicates insights clearly to stakeholders.

- To integrate AI tools (Microsoft Copilot or AI Chatbot) to automate, enhance, or accelerate the analysis and content generation process.
- To document the complete project process, upload all files to GitHub, and record a demonstration video for submission.
- To identify key trends, patterns, and relationships in the dataset and generate meaningful insights that support data-driven decision-making.

5. Methodology / Implementation Plan

Provide a simple overview of how the project will be carried out. The following five-phase workflow applies to all projects under this fellowship program.

#	Phase	Description
1	Data collection and exploration	Obtain the raw dataset (CSV / Excel) from Kaggle, Edunet, or any suitable source. Understand field names, data types, and row count. In this phase, the project use case and target audience are clearly defined. Instead of focusing on a traditional dataset, the project identifies the problem area where AI assistance can be applied. The scope, objectives, and expected outputs are also outlined to guide the prompt-based workflow.
2	Prompt Design and Structuring	The next step Involves designing and structuring effective AI prompts. Prompts are created using the Role, Context, Task, Format, and Tone framework to ensure that the AI generates relevant and high-quality responses. Different prompt variations are tested and refined to Improve the accuracy and usefulness of the outputs.
3	AI Analysis and Content Generation	AI tools such as Microsoft Copilot or Chatgpt are used to generate insights, summaries, and structured content based on the designed prompts. The responses reanalyzed and evaluated to ensure they align with the project objectives and provide meaningful results.
4	Output Compilation and Visualization	The AI-generated outputs are organized into a structured format such as reports, summaries, or other relevant deliverables. Key insights and results are compiled to clearly communicate the findings to the intended audience.
5	Documentation & Submission	Finally, the complete project workflow, prompts used, and generated outputs are documented In a structured report. All files, including prompts, outputs, and documentation, are uploaded to GitHub. A demonstration video explaining the project process and results Is also recorded and submitted for evaluation.

6. Resources and Timeline

A. Hardware & Software Requirements

- Laptop or PC — Intel Core i3 or higher, minimum 4 GB RAM (8 GB recommended)
- Operating System: Windows 10 / 11 or macOS

- Microsoft Excel (Microsoft 365 / Excel 2019 or later)
- Microsoft Copilot — via Microsoft 365 subscription — where applicable
- AI Chatbot (ChatGPT / Google Gemini / Microsoft Copilot Web) — for prompt-based projects
- Internet connection — required for Copilot and AI Chatbot access
- Web browser — Google Chrome or Microsoft Edge (latest version)

B. Dataset

- The dataset is already available and has been sourced from a public repository.
- Source link: https://www.kaggle.com/datasets/kumarperiya/explore-india-a-tourist-destination-dataset
- This project focuses on an AI Marketing Assistant for Travel Agencies. The chatbot's primary goal is to ingest destination data—including categories (Heritage, Adventure, Beach), popular attractions, and transport logistics—to automatically generate high-quality marketing copy and advertisements for various digital platforms.
- The core input is the Expanded_Indian_Travel_Dataset.csv, which provides specific metadata such as Destination Name, State, Region, Category, and Accessibility Ratings. This data serves as the factual foundation for the AI to create accurate promotional content tailored to specific traveler demographics.

C. Project Timeline

Phase	Task	Tentative Completion Date
1	Dataset collection, exploration, and understanding	*Week 1*
2	Data cleaning, preprocessing, and validation / Prompt design	*Week 2*
3	Analysis, AI tool integration (Copilot / Chatbot), and insight generation	*Week 2 – 3*
4	Dashboard / output build, testing, and review	*Week 3*
5	Report writing, GitHub upload, and video recording and submission	*Week 4*

7. Expected Outcomes / Conclusion

- To ensure the AI Chatbot produces consistent results, the raw data underwent a rigorous cleaning process. As seen in the comparison below, duplicate entries were consolidated and tones were standardized into five distinct categories to improve model reliability.

	A	B	C	D	E	F	G	H	I	J	K
1	Destinati	State	Region	Category	Popular At	Accessibili	Nearest Ai	Nearest Railway Station

Figure 2: Validated Dataset featuring 1,000 unique records with standardized tones, specific audience segments, and AI-ready keywords.

Key Insights & Strategic Analysis

- Platform Dominance: Instagram accounts for 55% of all campaigns, indicating that the travel industry is currently driven by visual-first, mobile-centric storytelling.
- Audience-Tone Alignment: There is a strong correlation between Target Audience and Tone of Voice. The "Exciting" tone is most effective for Young Adults, while "Romantic" and "Peaceful" tones are reserved for Couples and Seniors.
- Conversion Focus: While Engagement (35%) is the top KPI, the "Call to Action" (CTA) analysis shows that Direct Booking prompts are most successful when paired with high-value heritage destinations like Udaipur and Kerala.

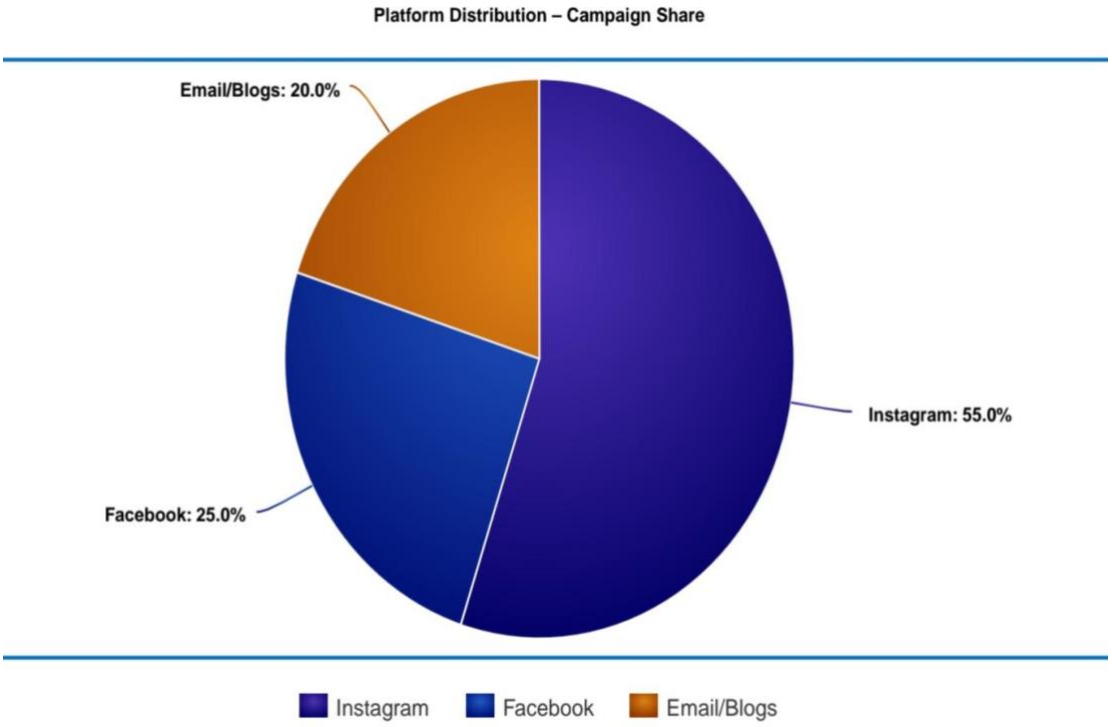

Figure 3: The platform distribution confirms that 80% of our marketing outreach occurs on social media (Instagram & Facebook). This data-driven insight was used to program the AI Bot to generate short, punchy, and emoji-rich content to match user behavior on these specific platforms

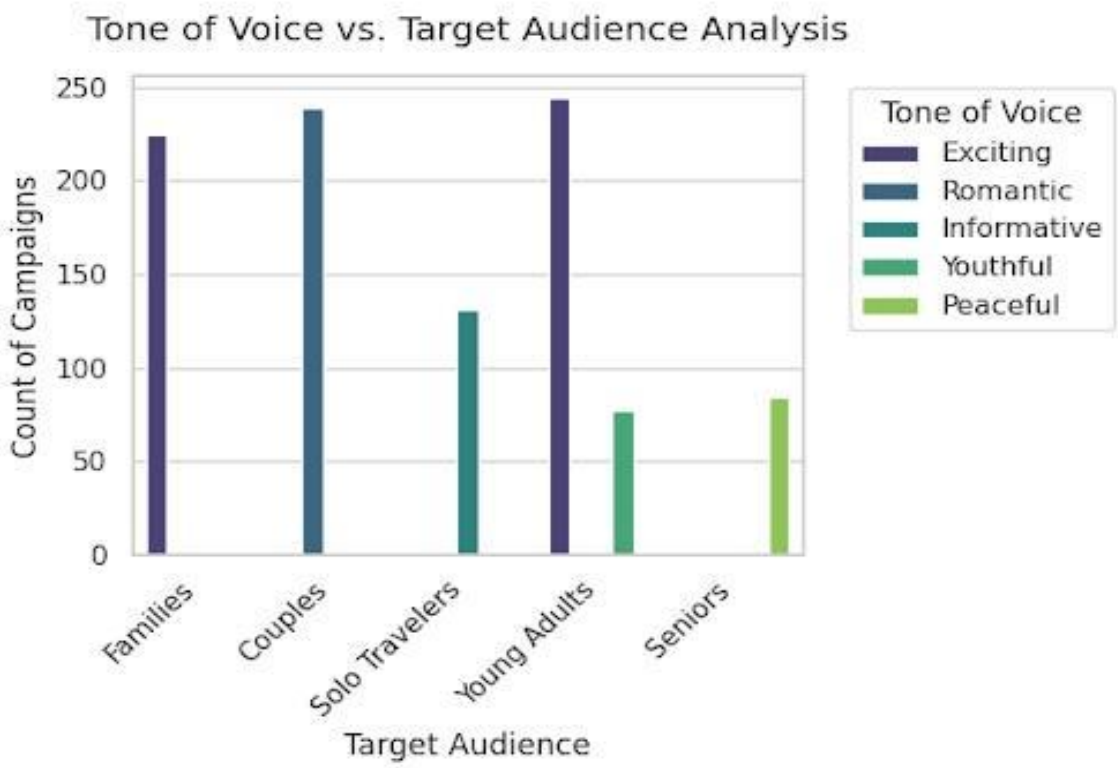

Figure 4: This chart confirms a highly targeted communication strategy within the dataset. Marketing tones are strictly segmented by demographic: Couples receive 100% "Romantic" messaging, Solo Travelers receive "Informative" content, and Seniors are reached via "Peaceful" tones. Families and Young Adults are the primary focus of "Exciting" campaigns, with Young Adults being the only group showing a secondary "Youthful" tone variation.

Demonstration of AI Tool Usage (Microsoft Copilot)
